Business Brain

The Agentic ERP · From Factory to Shelf

Do More. Spend Less.

One brain for factory, stock, sales and money. AI agents read live figures, propose the next step and act only through your approvals.

Run the whole company from one brain.

Sales + distribution | Brands + trade | Make + quality | Supply chain | Procurement

Finance | People + payroll | Agents | Gateway + API

Agents do the chasing. You make the calls.

Agents read the ledger

Figures come from the ledger. The model explains numbers and never invents them.

They propose, with reasons

Every proposal cites its records and its cost, and drafts the work within policy.

You make the call

Higher-risk actions wait for a named person on a card. Agents use the same doors as people.

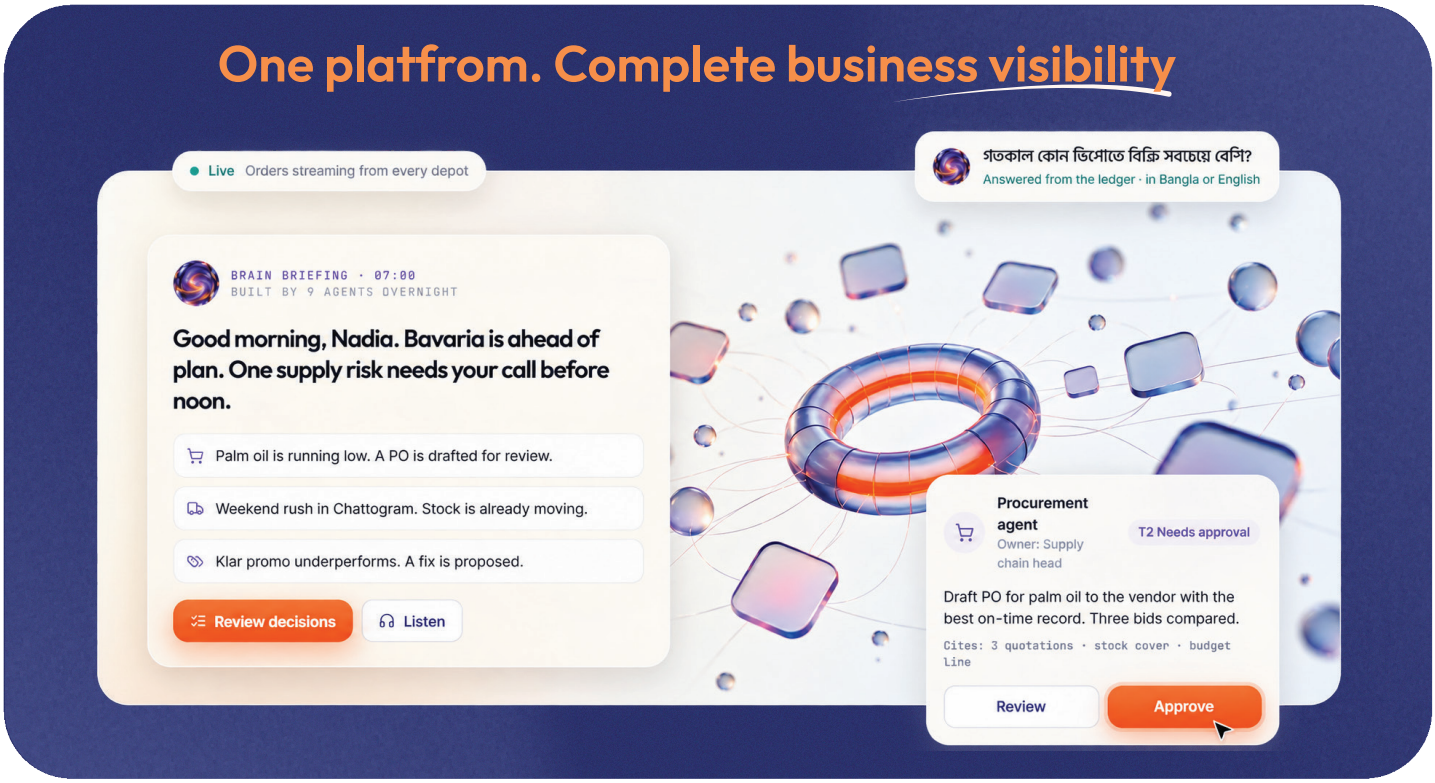

Ask in Bangla or English.
Figures straight from the ledger.

এই মাসে কোন ব্র্যান্ডের মার্জিন কমেছে, আর কেন?
Which brands lost margin this month, and why?

Brain answers with the figures, the cause and a chart.
Any action it suggests comes back as a card for you to approve.

One platfrom. Complete business visibility

Every team gets its own app.

One connected core under all of them. Each app sees the same live figures.
