qsor

Bangladesh's own cloud for compute, inference, and agents.

Your first impression, powered by artificial intelligence.

Rent high-performance GPU power for AI training, inference, image generation, and LLM hosting without investing in expensive hardware.

Built for how Bangladesh works!

GPUs on Demand
Access high-performance computing without upfront hardware costs.

Model & LLM Hosting
Train, deploy, and run your own AI models.

Flexible Scalability
Scale automatically with demand, or move to dedicated clusters without changing your stack.

Live Resource Monitoring
Track CPU, RAM, GPU, and memory usage in real time.

Secure Infrastructure
Protect workloads with role-based access control.

Locally Hosted
Bangladesh-based infrastructure with local technical support.

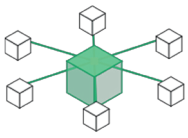

When an API isn't enough, take the whole machine.

Bare metal NVIDIA GPUs in data centres inside Bangladesh, built on validated reference designs.

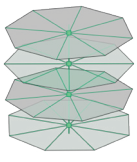

Dedicated bare metal GPUs with predictable performance, racked in Bangladesh.

Our cluster engine orchestrates multi-node jobs at the infrastructure layer.

Root access and custom stacks when the infrastructure is the product.

qsor

Deploy models. Run inference. Pay in taka.

Per GPU-hour, billed monthly in BDT. Pay by bank transfer, LC, MFS.
